

DISCLAIMERS

Please do not mortgage the iceberg.

Last updated: October 16, 2026 | cdsu.xyz

Flippy Seal Units is a meme and interactive character project. Memes can be fun. Markets can be extremely unfun. Both statements can be true at the same time.

01 The Big One: This Is a Meme

Flippy Seal Units is a meme and interactive character-world project built around playful seals, winter games, flipped words, community features and collectibles. The website, project materials, stories, games, graphics and social posts are for information, entertainment and community participation.

Nothing published by Flippy Seal Units is legal, financial, investment, tax or accounting advice. Nothing is a promise that number will go up, stay up, come back up, become sentient or respect your weekend plans.

02 No Promise of Stable Value

No token feature on this Site promises to track the U.S. dollar or another fiat currency, or to be redeemable by the project for dollars or another asset.

References to third parties do not imply sponsorship, partnership or endorsement unless they explicitly say so.

03 There Is No Secret Contract

No official project contract address is currently published on the Site. Any contract pretending otherwise is not official merely because it found a seal picture on the internet. Verify the final network, contract, supply, taxes or fees, liquidity settings, permissions and configuration through cdsu.xyz if token features become available.

If a project token becomes live, the blockchain and official project channels linked from cdsu.xyz are the source of truth for factual token configuration. Never sign a transaction just because somebody typed URGENT in all caps.

04 Price Can Do Extremely Creative Things

If token features become available:

- a token may have little or no liquidity;
- price can move sharply in either direction and can fall to little or no value;
- displayed market cap is not the same thing as cash you can actually withdraw;
- large trades can suffer price impact, slippage, taxes or fees;
- liquidity pools and trading venues can be exploited, paused, changed or disappear; and
- nothing on the Site guarantees price, liquidity, exchange listings, adoption or profit.

05 Blockchains Do Not Have an Undo Button

- Transactions can be irreversible.
- Smart contracts, wallets, bridges, RPC providers, launch platforms and other infrastructure can contain bugs or vulnerabilities.
- Fake sites, fake tokens, malicious approvals, phishing, malware and compromised accounts can cause permanent loss.
- Network congestion, outages or protocol changes can make things behave strangely at the worst possible time.
- No audit or security review can remove every risk.

06 The Project Is Experimental

Features, art, collectibles, token settings, integrations, games, chat, leaderboard rules and plans may change. A roadmap is a plan, not a sacred tablet found under the ice. The Site can contain bugs, outdated information or temporary outages.

Browser games can be botted or manipulated. Public chat can contain incorrect, offensive or malicious user content. Moderation and validation help; they do not turn the internet into a quiet library.

07 Third Parties Have Their Own Weather

Flippy Seal Units may rely on hosting providers, X, wallets, explorers, launch platforms, decentralized exchanges and other third parties. Their outages, fees, policies, restrictions, security incidents or discontinuation can affect the project. A link is not a guarantee, endorsement or force field.

08 Law and Tax: The Least Derpy Part

Digital-asset laws, tax treatment and platform rules differ between jurisdictions and change over time. You are responsible for understanding rules that apply to you. The availability of a website does not mean every token-related activity is permitted everywhere.

This is not a prospectus wearing a seal costume. Project materials are not intended to be a securities offering document or a promise of future performance.

09 Ownership: The Seal Is Still Not Yours

Holding any future project token does not by itself give you shares, equity, ownership of the project, ownership of its characters, a claim on project assets, voting rights or guaranteed benefits. If any separate feature ever creates a specific right, it should be described separately and accurately.

10 Security Says: Stop Clicking Everything

Verify cdsu.xyz, the official channels linked there and any full official contract address if token features become available. The project will never need your seed phrase or private key. Treat unsolicited support accounts, recovery services, giveaways and urgent wallet-signing requests as suspicious until proven otherwise.

11 As-Is Means As-Is

To the maximum extent permitted by law, the Site, project materials and related features are provided as-is and as-available. The project does not promise perfect accuracy, uptime, security, liquidity or value.

To the maximum extent permitted by law, the project, contributors and service providers are not responsible for indirect, incidental, special, consequential or similar losses arising from use of the Site, third-party services or blockchain activity. Nothing here excludes liability that cannot lawfully be excluded.

NO MAGIC LEGAL FORCE

This page is part of a meme project and is written in plain language for information and house-rule purposes. It is not legal advice, a legal opinion, a prospectus, or a magic shield. The project does not claim that a sentence on this page can erase rights, duties, or rules that apply under mandatory law or third-party terms.
